'Algo' platform to be installed in all Pizza Hut Singapore Stores

23 April 2018 (Melbourne): Dragontail Systems Limited (ASX: DTS) is pleased to announce that it has signed an agreement to install the 'Algo' platform in all of Pizza Hut Singapore's 35 stores by June 2018. The 'Algo' platform will also include Dragontail's unique driver sharing module, that allows stores to share delivery drivers to further improve customer service and lower operating costs.

This agreement represents the first full country deployment of the 'Algo' platform without an initial trial period. It follows successful testing currently being undertaken in-store by KFC Singapore, and the positive results achieved from the 'Algo' in other Pizza Hut markets like Canada.

Commenting on the agreement with Pizza Hut Singapore, Dragontail's Managing Director Ido Levanon said: "We are excited to be installing Dragontail's 'Algo' optimisation and analytics platform across Pizza Hut's 35 Singapore stores. It is the next step of Dragontail's growth strategy in Asia, following the positive results being achieved in testing with KFC Singapore.

"Not only will Pizza Hut Singapore benefit from utilising our 'Algo' platform, its delivery drivers will be able to be shared between stores through our unique driver sharing module. We are confident that this will further demonstrate the benefits our technologies provide to Quick Service Restaurants and foodservice businesses."

About Dragontail Systems
Dragontail is revolutionising the Quick Service Restaurant (QSR) and foodservice industry with its Algo System and computer-vision QT quality system that uses artificial intelligence (AI) machine learning.
The Algo System uses a sophisticated patented algorithm to optimise and manage the entire food preparation process from order to delivery. It is the first system in the world to fully automate and streamline the kitchen flow to deliver an immediate and significant return on investment to fast food and quick service restaurants.
The QT system's sensor and camera automatically monitor the preparation and cooking process in the kitchen to improve the quality and consistency of meals. Using proprietary advanced AI machine-learning technology, the system keeps improving its diagnostics, becoming even more efficient.
