

Domino's Pizza Enterprises to Install Dragontail Systems' Artificial Intelligence QT Camera System

November 8 2017

Dragontail Systems Limited (ASX: DTS) is pleased to announce that Domino's Pizza Enterprises Limited (ASX: DMP) will be the first pizza chain to install Dragontail Systems' artificial intelligence (AI) QT camera system. The agreement between the two companies will see Domino's Pizza Enterprises install Dragontail Systems' AI QT camera system as the 'Pizza Checker' in its stores.

Domino's Pizza Enterprises currently has over 2,000 stores across seven countries. It will implement this technology into all stores in Australia from next year. Domino's Pizza Enterprises will also look to rollout Dragontail Systems' technology in markets outside of Australia in which it operates, and has the exclusive global rights to do so under a 12-month agreement, with the ability to extend this exclusivity in other markets.

Dragontail Systems' proprietary artificial intelligence [AI] QT camera system's sensor gives customers more visibility over their order and instantly checks the quality of every pizza made. The new cut bench quality camera unit is an electronic eye that sits above the cut bench and photographs pizzas for quality control. It identifies pizza type, toppings, topping distribution, crust type and temperature, and reports back in three seconds.

The technology also provides customers with an image of their pizza on the cut bench, which will appear in real time on the Domino's Pizza Tracker page of the customer's order. As part of this process they are notified if their pizza has succeeded or failed the strong quality testing.

Dragontail Systems' CEO Ido Levanon said: "We are excited to have Domino's Pizza Enterprises on board. As the largest pizza chain in Australia, and with operations in seven countries, Domino's Pizza Enterprises is committed to ensuring quality remains high during extremely busy periods and the incorporation of Dragontail Systems' artificial intelligence [AI] QT camera system will assist in this journey."

About Dragontail Systems

Dragontail is revolutionising the Quick Service Restaurant (QSR) industry with its 'Algo' system and computer-vision QT quality system that uses artificial intelligence (AI) machine learning.

The 'Algo' system uses a sophisticated patented algorithm to optimise and manage the entire food preparation process from order to delivery. It is the first system in the world to fully automate and streamline the kitchen flow to deliver an immediate and significant return on investment to fast food and quick service restaurants.

The QT system's sensor and camera automatically monitor the preparation and cooking process in the kitchen to improve the quality and consistency of meals. Using proprietary advanced AI machine-learning technology, the system keeps improving its diagnostics, becoming even more efficient.
