

First 'ALGO' Installation Goes Live with KFC ASIA

October 12 2017

Dragontail Systems Limited (ASX: DTS) is pleased to announce that after successfully completing complex preparations for IT/POS integration required by KFC Asia, the first 'Algo' platform installation by Dragontail Systems in Asia has gone live. This first store installation is part of a wider pilot program with KFC Asia in Singapore and Malaysia.

Dragontail System's relationship with KFC Asia was formed following the significant operational benefits Yum! Brands experienced using the 'Algo' platform in their Pizza Hut Canada corporate owned stores.

The KFC Asia pilot is planned to run for two months, and will be undertaken in two stores in Singapore and another two stores in Malaysia. Following the successful completion of the pilot phase, the 'Algo' platform would be potentially installed through KFC Asia's network of locations.

In addition to all the efficiency benefits a QSR operator would receive from using the 'Algo' platform, Dragontail Systems has adapted its platform to enable KFC Asia to also monitor food preparation [given quantities of food are pre-prepared] as well as reduce food wastage, and streamline system data for marketing tools. KFC has a specific method of operation, and Dragontail Systems has adapted the 'Algo' to suit those specific needs, while also developing new platform features that will enhance the kitchen processes in other "burger" and "pre-prepared food" QSRs globally.

Commenting on the pilot program, Dragontail Systems' CEO Ido Levanon said: "We are very excited to see our first 'Algo' platform installation in Asia go live with KFC Asia. With over 3,400 stores located across South-East Asia, KFC Asia is the only KFC network globally that currently home-delivers. We are very focused on ensuring that KFC Asia experiences the operational benefits from our 'Algo' platform that Pizza Hut Canada experienced, as well as additional efficiency benefits to reduce food wastage that occurs in kitchens that construct orders from pre-prepared ingredients."

About Dragontail Systems

Dragontail is revolutionising the food service industry with its Algo System and computer-vision QT quality system that uses artificial intelligence (AI) machine learning.

The Algo System uses a sophisticated patented algorithm to optimise and manage the entire food preparation process from order to delivery. It is the first system in the world to fully automate and streamline the kitchen flow to deliver an immediate and significant return on investment to fast food and quick service restaurants.

The QT system's sensor and camera automatically monitor the preparation and cooking process in the kitchen to improve the quality and consistency of meals. Using proprietary advanced AI machine-learning technology, the system keeps improving its diagnostics, becoming even more efficient.
